Raashid Riza

Student ID number 110107

Dissertation submitted in partial fulfilment of the requirements for the degree of MSc Sustainable Design of the Built Environment

Faculty of Engineering & IT

Dissertation Supervisor

Professor Bassam Abu-Hijleh

April 2014

DISSERTATION RELEASE FORM

Student Name	Student ID	Programme	Date
Raashid Riza	110107	SDBE	30 April 2014

Title

Integration of Wind Catchers in Modern Residential Buildings in the UAE as a Means of Providing Thermal Comfort

I warrant that the content of this dissertation is the direct result of my own work and that any use made in it of published or unpublished copyright material falls within the limits permitted by international copyright conventions.

I understand that one copy of my dissertation will be deposited in the University Library for permanent retention.

I hereby agree that the material mentioned above for which I am author and copyright holder may be copied and distributed by The British University in Dubai for the purposes of research, private study or education and that The British University in Dubai may recover from purchasers the costs incurred in such copying and distribution, where appropriate.

I understand that The British University in Dubai may make that copy available in digital format if appropriate.

I understand that I may apply to the University to retain the right to withhold or to restrict access to my dissertation for a period which shall not normally exceed four calendar years from the congregation at which the degree is conferred, the length of the period to be specified in the application, together with the precise reasons for making that application.

Title	Page
Abstract	i
Dedication	v
Acknowledgement	vi
Section 1: Introduction	1
1.0 Introduction	3
1.1 Aims and Objectives	7
Section 2: Literature Review	9
2.0 Literature Review	10
2.1 Comfort Standards and Sustainable Design Strategies	10
2.2 Influence of climatic factors on building design	13
2.3 Traditional Architectural Techniques	14
2.4 Traditional architectural techniques used in Korea	15
2.5 Traditional architectural techniques used in India	20
2.6 Selected analysis of Traditional Cooling Systems used in the Gulf region	27
2.7 Wind catchers	31
2.8 Integrating traditional sustainable strategies in modern buildings	38
2.9 Literature review concluding remarks	51
Section 3: Methodology	52

3.0 Methodology	53
3.1 Field measurements	53
3.2 Scaled models and laboratory measurements.	54
3.3 Case studies and surveys	59
3.4 Simulation	61
3.5 Methodology selection	62
3.6 Software selection & Validation	63
3.7 Selection of the site	67
3.8 Abu Dhabi Weather	70
Section 4: Model Set Up	74
4.0 Model set up	76
4.1 Setting up the existing case	76
4.2 Testing out other parameters and models	80
4.3 Condition for window or wind tower opening to be operable (opening profile)	82
Section 5: Results & Discussion	87
5.0 Results & Discussion	88
5.1 The Reference Case	89
5.2 Impact of Floor to Ceiling height	90
5.3 Impact of the height of the wind tower	93
5.4 Impact of the Orientation of the Wind tower.	98

5.5 Impact of the area of the window.	100
5.6 Impact of the area of the wind tower opening.	102
5.7 Impact of the percentage opening of window opening	109
5.8 Impact of the percentage opening of the wind tower openings	112
5.9 Assessing the optimal configuration	115
5.10 Comparison between existing case and optimum case in terms of energy consumption and CO ₂ emissions.	117
Section 6: Conclusions & Recommendations	119
6.0 Conclusions & Recommendations	120
6.1 Conclusion	120
6.2 Recommendations for future study	122
References	124
Appendix A	133
Appendix B	134

List of Abbreviations and Acronyms

DDH	Degree Discomfort Hours
TCR	Thermal Comfort Range
HTCR	Hours in the Thermal Comfort Range
FCH	Floor to Ceiling Height
